

The design of The Esplanade has been inspired by seaside towns of the Art Deco period, but built with modern construction methods and services.

These state of the art apartments will include an air source heat pump offering underfloor heating and cooling, advanced thermal insulation, high spec solar reflective glazing and a green sedum roof.

The contemporary style will be conveyed through sleek fixtures and fittings, warm porcelain tiled floors and enhanced with an expanse of glazing offering sea views and bringing the outside in.
